

## Match My Number

You need number cards 1 to 20. Some sticky notes or blank pieces of paper.  
Some counters – you can use Lego™ bricks or raisins!

### How to play

- Lay the number cards in a row, 1 to 20.
- Now turn them all over so they are face down in the same places.
- Point at where 1 is. Turn it over. Then turn over 12.
- Each of you writes three numbers on the sticky notes or blank paper.
- You both place each of the numbers you have written on top of the card where you think it goes on the laid-out track. Place all three numbers.
- When you're done, turn over the card numbers with sticky notes on them and see if the number matches the card beneath it.
- If it does, that person takes a counter. They get one for each correct number. (Maximum 3 each.)

- Start again, but this time lay the number line out backwards, i.e. from 20 down to 1. Turn all the cards face down.
- Then each person writes three different numbers from last time. They place their sticky notes on the face-down cards which they think match.
- When you have both done this, turn over the cards. Do the numbers match? Take a counter for each correct match. *How many counters have we each got?*
- Play a third time, but this time lay out the cards in two rows, one below the other.
