

COLOUR BY NUMBERS PUZZLE

INSTRUCTIONS

Wallace and Gromit (and a host of other memorable characters) have been hidden in puzzles each made of hundreds of overlapping circles, the segments of which are numbered from 1 to 5.

Each number represents a different tone that, when filled in, magically reveals a cracking portrait. Number 1s should be coloured with the darkest tone, and number 5s with the lightest. Any segments that aren't numbered should be left blank.

If you want, you can just invent your own colour scheme and see how they turn out! Once you've completed your Querkle, it's time to make yourself a nice hot cup of tea and stand back to enjoy your artistic creation!
